View trainings. Take surveys and assessments. All from ONE player.

For today’s learners, if it’s not easy to access and complete all of their training, it’s simply not done. That’s why the ExpertusONE Digital Content Player gives learners the easy and consistent training experience they’re looking for.

No pop-up blockers or annoying downloads—plays SCORM, AICC, xAPI, pdfs, Word docs, PPTs and even surveys and assessments, all from one window

Presents a clear learning path—playlist shows all modules associated with training; learners know what’s completed, what’s next and can start with just one click

Error-free completion tracking—learners never leave the LMS to view content or surveys and assessments, so all progress is captured

Web and mobile-enabled—learners can seamlessly switch between their desktop and mobile devices
Put all of your learning pieces together for ONE seamless experience. How the ExpertusONE Digital Content Player works.

One player for every kind of content

While some LMSs have a content player, most lack a consistent training consumption experience. Pdfs have to be downloaded. Videos require pop-up windows. And learners have to exit the player to take surveys and assessments.

However, the ExpertusONE Digital Content Player displays all of a learner's training components in one consistent manner. Whether it's a knowledge object, video, quiz or survey, they are all launched from one lightbox window in the LMS. The benefits are many:

1. Reduced Help Desk calls/tickets—from content that won't load due to pop-up blockers

2. No lost downloaded content—content plays immediately and does not need to be saved to a learner's phone, laptop or desktop; also ensures content is actually consumed, instead of marking it complete just because it was downloaded

3. Guaranteed progress tracking—all content types, including pdfs, presentations and videos, are tracked by the LMS (reducing errors); data from xAPI content or content created in our Interaction Studio can also be captured by ExpertusONE's LRS for deeper analysis

4. Easy, seamless experience—bookmarking is available for video content, which saves users the hassle of having to find and restart previously viewed training; player also strips out distracting ads and recommendations

Topline navigation speeds course completions

In the ExpertusONE Digital Content Player, every module tagged to a course or training (including surveys and assessments) is conveniently displayed via topline navigation. So, learners can quickly see what they need to take and in what order.

Their progress bar automatically updates in real-time, both for each module and the entire course. And once learners complete content, they can immediately move onto a related assessment and view their score—without having to open multiple windows or another program.

From a learner's point of view, this makes the consumption of training seamless. All the content they need to take, from eLearnings to surveys, is contained in the content player and presented in the order it needs to be consumed.

This speeds learners through their training requirements, while reducing errors, lowering frustrations and holding their engagement.
Seamless mobile experience delivers training on learners’ terms

The ExpertusONE Digital Content Player is HTML5-enabled. So, learners can move from their desktop to phone or tablet seamlessly. No progress lost. No learning curve needed.

Mobile Views

From the mobile app, learners can still view and launch all content, surveys and assessments in one window.

They can even complete OJT via ExpertusONE’s Observation Checklist. Here instructors or managers can capture feedback, evaluate performance and mark learners complete for training conducted on-the-job.

Observation Checklist (OJT)

Providing a seamless mobile experience is yet another example of how the ExpertusONE Digital Content Player delivers training in the way people want to learn today... fast, easy and convenient.
