ExpertusONE Learning Record Store

Capture any learning experience. Gain deeper training insights and enhance LMS value.

The first LMS with a built-in learning record store (LRS), ExpertusONE makes it easy to find, record and manage all of your users' learning experiences using Experience API (xAPI) standards.. The ExpertusONE LRS:

- Provides an easy, standardized way to manage records for all learning engagements—eLearning, videos, articles and more

- Collates these records for a complete, real-time snapshot of user training activity and experiences

- Raises LMS value with dashboard analytics that help you evaluate learner engagement, improve training effectiveness and support adaptive learning experiences

Any Learning Format

Finds and records learning from any format or source, including: gaming, MP4, YouTube and virtual reality

Real-time Dashboards

Uses modern dashboards for quick analysis of learning data in real-time

One Location for All Learning Data

Simplifies how you measure the return and impact of your learning investment

Measure the business impact of your learning resources.
How the ExpertusONE LRS works.

Captures and standardizes all learning data

Wherever learning happens, the ExpertusONE LRS can capture it. It collects learning data from multiple content sources, including LMSs, content platforms and even other LRSs. Then it stores all learning interactions (from eLearning, web pages, games, VR simulations, etc.) in one consistent format—as xAPI statements. These statements contain information about a person or group's activities with formal and informal training content.

Provides a complete view of the learning experience

All learning data is held in one consolidated repository within the LRS as xAPI statements, and the learning activities become part of each user's recorded training history. This provides a complete picture of their entire learning experience, including: real world activities, mobile app interactions, learning achievements and more.
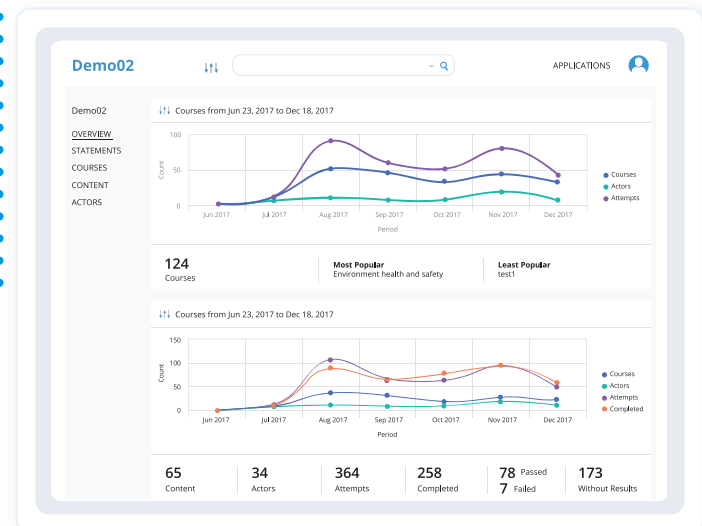

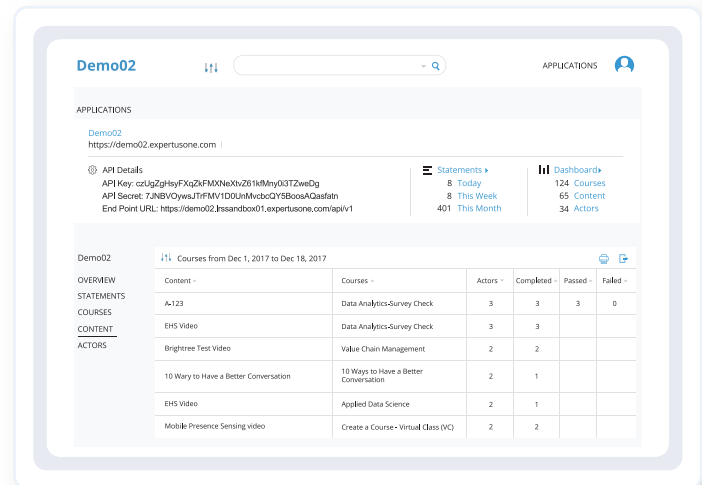

Simplifies reporting and analysis of learning engagement

With the ExpertusONE LRS, you can seamlessly track and report on all learning, enterprise-wide, from one centralized location. This simplifies your management and reporting of all learning activity. It also makes it easier to evaluate the effectiveness of your training programs, and your investments in them.

Some of the advanced analytics and data visualization capabilities offered by the ExpertusONE LRS include:

- **Real-time dashboard views**—quickly see and act on the latest learning trends (popular courses and activities, most active users, highly accessed content, etc.)

- **Drill-down functionality**—easily perform deeper analysis on specific learning activities by content, user and activity type

- **Detailed xAPI statements**—accurately analyze how learners are consuming content and how to improve training effectiveness and value

ExpertusONE Learning Record Store

Easily track and report on the learning resources users are finding and sharing—anywhere, and in any format.
