

# ExpertusONE Insights

Finally there's an LMS that delivers advanced reporting. ExpertusONE Insights is a revolutionary, integrated, and simple to use reporting tool for managers, learners and admins, generating tailored reports in five clicks or fewer or by just asking AI Analytics. With ExpertusONE, you can access business-critical intelligence on-demand and in real-time.

- **Get real time access**—Get business-critical information, including learning progress, compliance status, and knowledge base demand—on demand.
- **Drag and drop report creation**—Easily create custom reports on anything by selecting the desired learning entities then pulling in the fields you need to report on. Add charts to your reports to get visual insight.
- **Keep data secure**—With both role-and domain-security, users will only be able to report on the courses, people, and functional areas that they have access to, streamlining the number of reports needed and keeping information in the right hands
- **Get information to their inbox**—Schedule reports for yourself and others, sending insight directly to their inbox

## One report, multiple views

Tailor reports in-app by filtering columns. Save for later use, getting one report multiple ways without getting buried in copies.

## Natural language requests

If you have a question about your data, just ask our AI Analytics tool. It understands your question and will get you the answer right away.

## Robust compliance reporting

Meet the most stringent reporting requirements for compliance training, getting down to the most granular detail.

## Optimize Your Learning With Insight:

Get all the information you need to create a powerful learning function and demonstrate real value for the organization:

**Interact with reports on the fly**—Tailor reports in-app to get exactly what you need without creating something new. Filter results or add or remove columns directly from the application. If it's a view you'll use again, you can label and save it, so you use one report multiple ways. Export the results for further analysis.

**Measure knowledge base access**—See who's accessing the informal content that's not tied to course completions with reporting on the knowledge base. Identify valuable assets, proactive learners, and measure the value of your informal learning program.

**Get insight into every interaction**—With ExpertusONE's learning record store (LRS) all xAPI compliant content, including the content created in the Interaction Studio, is available for reporting. See which questions are tripping people up, how long learners linger, where they took training, and more.

**Create matrixed reports**—Support your most complex reporting requirements with matrixed reports created with our easy to use reporting tool.

**Integrate BI insight**—Review BI analyses alongside your learning data and reports to centralize all of the insight you need in a single place.

**Send reports automatically**—Schedule select reports to run daily, weekly, or monthly and send the results to identified recipients and the format (XLS, PDF, PPT) of your choice, or encrypted and sent to the cloud or SFTP storage.

**Run reports directly from anywhere in the system**—Pull registration reports, completion reports, and more directly from the course, class, department, and more.

**Ensure data security**—Two people running the same report will still only get the data that they are allowed to see with ExpertusONE's domain-based data security. This keeps data secure and streamlines report management.

**Get answers when you need them**—Get real-time reports on any device so you can easily track learning progress, compliance status, knowledge asset demand, and other key metrics.

## Get the Answers You Need

ExpertusONE Insights is the analytics and reporting tool that enables you to deliver more effective L&D programs in just a few clicks. Work smarter with drag-and-drop report creation, an AI report assistant, automatically generated data visualizations, and more.
