ExpertusONE Observation Checklist

ExpertusONE's Observation Checklist is a modern digital checklist that provides an easy way to measure and validate in-the-field results of learning across your organization and departments:

- **Validate learning and skills in action**–Observe, track, and assess performance in the field to confirm that learning is working and being applied in the field.

- **Digitalize field evaulations**–Take your in-person evaluations online with convenient, mobile-friendly checklists that eliminate the need for paper, scanning, and all the other inconveniences that go with it.

- **Capture performance in real-time**–Capture evaluation results in real-time, ensuring records are accurate and current.

- **Measure impact**–The fully LMS integrated solution ensures training is working by tracking real-time progress, assessment trends, and performance data.

Confirm Learning Results

Observe improvement in action by confirming that learners can apply learning to their work

Verify Skills

Verify that learners can demonstrate their skills and create certainty around your organizations' skill profiles

Make Results Accessible

Digital checklists mean that results are available immediately and to everyone with system access

Ensure Consistent, Competent Job Performance.

While training ensures that learners are taught a capability, Observational Checklist confirms that those capabilities can be demonstrated. Using a digital checklist of tasks, managers, instructors or mentors can conveniently observe a learner's progress and accurately assess their mastery of skills upon training completion:

Comply with regulatory requirements–Capture that the learner was observed demonstrating the skills and abilities so that they can be reported to regulatory agencies or leadership.

Discover where employees are running into trouble–Identify employees that need more training by discovering which tasks are posing trouble.

Get consistent job performance–Consistent evaluations ensure that everyone is doing their job the same, and correct way, and enables you to confirm when employees are ready for increased responsibility

Validate skills–Validate self-reported skills or competencies so that those responsible for staffing can confidently select employees for new roles

Move from paper to mobile–Eliminate paper-based evaluations, and replace them with real-time, mobile-enabled digital checklists

Report on performance–Capture performance data and make it reportable alongside other learning data, giving you deeper insights into your workplace's competencies

Get the experts evaluating–Instructors can evaluate, but so can managers, mentors, and subject matter experts. You identify who is qualified to evaluate.

Measure Results with Fully Integrated Checklists

Quickly create evaluations specific to learners' skills or competencies, allow evaluators to do the work in the field from any device, and automatically capture checklist data in the LMS for a complete picture of the in-action skills of your workforce.
