

ExpertusONE Digital Content Player

The ExpertusONE LMS Digital Content Player provides enterprises with a flexible solution that shows all learning content in a single interface. Integrate any content type you need—even virtual reality—into our adaptive and mobile-friendly content player so you can deliver training without limits.

One Player for All Learning & Training Content

Simplify content consumption with our Digital Content Player, which displays all kinds of learning content in one integrated lightbox, whether it's a PDF, video, quiz, or survey—all without leaving the player. No pop up blockers, no annoying downloads, no more learner complaints.

Effortless Tracking

All activity is captured within the LMS for accurate progress and compliance reporting.

Guided Learning Paths

Learners can track real-time progress, see what's next, and stay on course.

Mobile-Ready

HTML5-enabled for smooth transitions across devices, with offline access for learning anywhere.

Deliver Training With Ease

The ExpertusONE Digital Content Player plays SCORM, AICC, xAPI, PDFs, Word documents, PowerPoint slides, and even surveys and assessments, all from one embedded window. It's an experience that:

- **Decreases support tickets** by eliminating content that won't load due to pop-up blockers.
- **Ensures all content is easily found**, rather than getting lost in computer files, by eliminating the need for downloads. With ExpertusONE, content plays immediately and does not need to be saved to a learner's phone, laptop, or desktop.
- **Reduces tracking errors** since all content types are tracked by ExpertusONE. Data from xAPI content or content created in our Interaction Studio can also be captured for deeper analysis.

Set a Clear Learning Path

Learners will never lose their place thanks to a progress bar that automatically updates in real-time, both for each module and the entire course. To also help encourage course completion, every module tagged to a course or training (including surveys and assessments) has a convenient topline navigation within the player. This enables learners to quickly see what they need to take and in what order.

The Digital Content Player also strips out distracting ads and recommendations so the learner can focus solely on your content. It also helps keep learners from losing their place in the course with bookmarking, which removes the hassle of having to find and restart previously viewed training.

And once learners complete content, they can immediately move onto a related assessment and view their score, without having to open multiple windows or another program.

Improve Your LMS Content Experience
