ExpertusONE Mobile App

The ExpertusONE mobile app improves productivity by giving your learners, managers, and instructors the ability to learn, track, and complete courses wherever they are. From one app, users can stay on top of all their training activities, manage courses and schedules, and analyze learning progress.

Mobile-First Learning and Training

No matter where learners are, they have full access to their training catalog from the mobile app, which also comes with downloadable content, offline sync, and one-click class registration and launch to make learning a seamless experience. The app also provides trainers and instructors with enhanced administrative and regulatory support, such as with presence sensing to automatically detect attendance, geofencing to restrict training to approved hours or locations, and class scheduling and calendar management tools.

Empower anytime learning: Support learners with always-on training and resources accessible from anywhere and any device.

Improve trainer productivity: Actionable analytics, push surveys, and assessments are all available from their mobile device.

Make training personal: Tailor the app home screen, modules, and preferences to each role and permission level.

For Learners

ExpertusONE Mobile helps learners stay on top of required learning activities wherever they go. From just one screen, they can see and act on:

- Recommended and in-progress courses

- Pending certifications, compliance, and mandatory training

- Upcoming virtual or ILT classes

- Training orders, notifications, and announcements

- Training plan progress and activities

In seconds, mobile learners can search using keywords, open text and filters, and even connect with other learners via class-based collaboration and gamification tools. To make learning even more convenient, mobile learners can also download content to view offline and continue where they left off on a different device thanks to full progress sync. And, to save storage space, learners can enable their app to automatically delete completed training from their devices.

For Instructors

ExpertusONE simplifies work for instructors and elevates their training delivery, whether they're training in the field or switching devices in the classroom. From the mobile app, instructors can eliminate scheduling conflicts or missed classes by managing their class scheduling via the app's calendar module and sync it to their device. The app also solves the problem of low survey completions by allowing instructors to push surveys and assessments to learners during class—giving trainers valuable insight into course and content effectiveness.

For Managers

ExpertusONE empowers managers to always stay close to their teams' learning with streamlined, simplified workflows that easily track learner progress. From within the app, managers can also access analytics and detailed reports on a learner's course history, the training tasks they've completed, and changes to their record. This helps them quickly identify who may be falling out of compliance and send them automated reminders and push notifications from their device.

Designed For Intuitive Learning

Whether you're searching the training catalog or accessing reports, navigating the ExpertusONE mobile app is quick, easy and secure, with features to put the power of the platform in your hands wherever you are, including:

- Option to use pulldown menu or click icons for app navigation. A 'Take Tour' function demos all critical app actions.

- Customizable settings and themes, including calendar sync with Outlook and Google, and notification blocking for weekends or by category.

- Security features such as the app can't be opened without active LMS credentials.

- In-app ability to purchase training and courses, add discounts, and use multiple payment options/currencies.
