

ExpertusONE Collaboration Hub

ExpertusONE's Collaboration Hub facilitates connected learning and streamlines communication, giving learners a digital space where they can access shared training resources, participate in learning cohorts, and connect with their peers and managers.

Bring Everyone Together

The Collaboration Hub unlocks the full potential of group training and personal mentoring within the ExpertusONE platform, fostering a culture of continuous learning and team growth. By seamlessly integrating collaborative learning experiences, it enables employees to share knowledge, gain insights from peers and mentors, and build stronger connections across teams. Whether it's structured group sessions or one-on-one mentoring, the Collaboration Hub supports personalized development paths and encourages active participation. This powerful feature empowers organizations to cultivate talent, boost engagement, and drive performance—all in one unified learning environment.

Connect Learners and Managers

Everyone can easily schedule, host, and access meetings within the platform.

Get to Key Information, Faster

Provide quick access to team member profiles, training history, and the ability to recommend learning.

Increase Cultural Cohesiveness

Set employees up for success, break down silos, and enhance connection to the broader organizational mission.

Feature Highlights

Companies need learning and training tools that make collaboration accessible and efficient so nothing hinders team members' abilities to work together. The ExpertusONE platform enables both coaching and collaborative learning between teammates. These are just some of the features available:

- **Instant meetings:** Managers can initiate instant meetings directly from the "Meet Now" section. This feature allows them to quickly set up virtual meetings or video conferences with team members without the need for scheduling in advance.
- **Virtual classrooms:** Managers can easily set up virtual classrooms to conduct live training sessions, webinars, or presentations for their team members. This enables managers to share content, deliver lectures, and engage with participants in real time.
- **Recorded meetings:** Managers are able to create and edit courses with the content they already have or convert the meeting recordings into a course from the Collaboration Hub section.
- **Recommended learning:** Managers are able to recommend the courses they have created to their team members.
- **Streamlined administration:** A new Admin Group is created for each organization where all managers will be given access to the Course Creator application. 'Target Audience' access is given to let the manager/admin provide access to the team/organization members for the created course.

Improve the LMS Experience—for Everyone
